

Project Proposal

Data Mining and Machine Learning Course • M.Sc. in Artificial Intelligence and Data Engineering

Student 1	FirstName, LastName, Student ID	Student 2	FirstName, LastName, Student ID
------------------	---------------------------------	------------------	---------------------------------

1. Domain and Core Idea

Briefly describe the application domain and the core idea of your project.

2. Dataset

Name	Name of the dataset
Source / URL	Link to the dataset (e.g., UCI, Kaggle, OpenML, ...)
Description	Briefly describe the dataset (domain, features, size, target variables, ...)

3. ML Tasks

List the ML task(s) you plan to perform (e.g., classification, regression, forecasting, association rule mining, text mining, ...).

4. Motivation

Why did you choose this dataset and task? What do you hope to learn or achieve? Are there scientific papers that already addressed the task you have in mind using the same dataset you chose? If yes, what is the maximum performance achieved? And how do you expect to achieve that performance (or higher) without cloning that pipeline?

This proposal must not exceed one page. Do not modify font size and page margins. Submit via the course Elearn page.
